## EDUCATION

---

### Technology / Media and Information Technology – Focus: Game Development

NTI-Gymnasiet, Stockholm

08/2017 – 06/2020

Relevant coursework: Web Development (HTML & CSS), Programming 1 & 2 (C#, REST API, Postman, Git, Agile)

## WORK EXPERIENCE

---

### System Engineer

BITS DATA, Södertälje, Full Time

07/2021 – Present

- My main project is developing a **salary management system** as a **full-stack web application**. The project aims to create a ready-made solution where the user can handle salary calculations and create files for export to an external system.
- Integrated **NgRx Store** to our salary management system, which provides **reactive state management** for Angular applications.
- Optimized our system which made it possible to roll out our new DMS to clients parallel instead of sequentially, which shortened the release process of the latest DMS to clients by 50% and cut expenses of rollout by 20%.
- I built an **alert system** for our Azure products using **Logic Apps** and **Microsoft Teams API integration** to get direct notifications to our team channels. As well as **TOPdesk integration** to create incidents for our support team.

### System Technician

Försvarsmakten, Enköping, Full Time

08/2020 – 06/2021

- Had four months of education in **electricity, Linux, networks, servers**, and more **IT**.
- We worked in a group of **six technicians/mechanics** in our military practice. Depending on what issues were reported and if many of us were free, then we chose to send one person with a lot of experience, and another with less experience, to give everybody a chance to **develop new skills**. This meant that even though I had zero experience in mechanic jobs, I got to do mechanic jobs, which made me learn more about how vehicles and engines were constructed.

### Front End Developer

Klimato, Stockholm, Part Time

05/2019 – 01/2020

- Developed the **front end of a web application** based on Vue.js Framework with two other developers.
- My first web developer job taught me more about **agile working, communication**, and **product development** in a product team. Because it is a startup company, I got the chance to communicate with all the team members almost every day. That helped me better understand how their roles worked and connected to the product.

## LEADERSHIP EXPERIENCE

---

### Military Group Leader

Försvarsmakten

08/2020 – 06/2021

- Led and supported groups based on 2-8 soldiers in combat, camp, and mechanic/technician situations.
- I had to cooperate with other group leaders to match our higher-up's commands.
- Two weeks of leadership education, both military and civil matter. Learned about how to get the best result for the group, get everyone involved and find their strengths, and communicate short, concise, and understandable manner so as not to waste people's time.

### Platoon's Trustee

Försvarsmakten

09/2020 – 06/2021

- I was elected to be the platoon's trustee. I helped people through their tough times in the military service by providing emotional support or requests to our commanders to improve their situation.
- Held meetings with the platoon, where everybody had a chance to bring up complaints or improvements on everything. It was also a time to reflect on earlier weeks, how the exercises have been, what everybody has done well, and what could improve in the future.
